CRYPTOCURRENCY MARKET – TRUST & TRANSPARENCY!

INTRODUCTION

Cryptocurrency Market is a fast rising company registered in the United States of America with a professional marketplace powered by a Defi token, the project aimed at bringing absolute transparency and decentralization to the blockchain and cryptocurrency space, a professional platform that bears trust through a smart contract that allows both services providers and buyers to execute contracts without trust issues.

The team came up with the idea of bringing transparency to the cryptocurrency space, to encourage more people to come into the blockchain industry knowing that they can transact in the space not having to worry about who to trust.

Any realistic cryptocurrency CEO, user, investor, trader, or ardent observer who has been in the system for a while can attest to the fact that the cryptocurrency space needs some sanity in terms of transparency. Most of the information out there is just a mirage, and most investors are not tech-savvy while most do not know how to verify information on the blockchain. But with the launch of the cryptocurrency markets projects, a holistic approach to transparency in the blockchain industry will be at the tip of the fingers of the community. The team is poised to deliver a world class product that will serve the blockchain and cryptocurrency space, with a niche to beat already existing professional platforms that do not have smart contracts that escrows contracts between service providers and buyers.

Cryptocurrency Market will be a gathering platform for Professionals from all walks of life that would gladly depend on the trust provided on the platform.

THE PROJECT IDEOLOGY

Cryptocurrency market is a decentralized platform that is aimed at bringing transparency to the cryptocurrency and blockchain industry, also providing users, traders, investors, and institutions with adequate information for a better-informed decision.

Cryptocurrency Market is aimed at reducing the hassles of roaming on several platforms before retrieving specific information; the platform will concentrate on centralizing information on a decentralized platform which will in turn save both time and money.

The idea is to maximally eliminate scams from the blockchain and cryptocurrency industry and bestow trust from the unbanked population of the world, the freelance sector, and the remote service providers and buyers. Cryptocurrency Market will provide the following Defi services;

A Decentralized Staking Platform.

- Cryptocurrency Market will provide staking functionalities, which will enable users who stake CCM token on the platform to earn several cryptocurrency assets including BTC, ETH, USDT, MOR, and DGB. Other cryptocurrencies will be included over time.

- Earnings on other cryptocurrencies will be proportional to CCM token holdings calculated on the platform based on internal formula which will be disclosed to the community once the launched quarter approaches, as a subsidiary of MorCrypto Exchange, CCM token will be immediately listed on MorCrypto Exchange after the presale and Uniswap listing.

A Decentralized Marketplace.

- Cryptocurrency Market platform will provide a decentralized service providing platform for buyers and sellers of goods to interact without any interference from a third party. In the last couple of years, the global village has expanded and service providers have found the need to work online and remotely more than before and the pandemic which has introduced a new era has made remote services very essential.

- The obstacle has always been the issue of trust between the parties involved and this has limited the corporate world to a great extent, especially the blockchain industry. For example, a project wants to list an asset on a P2P trading exchange but can hardly reach out to the right authorities in charge of offering this service, or a project is in need of promotional services and reaches out to a company to deliver the services and they eventually fall into the hands of fraudsters, make payments to these fraudsters and lose their funds in the process.

- The Cryptocurrency Market platform will ensure that no service is being paid for without proof from both parties involved provided on the platform to show completion of contract. The platform will automatically provide a contract receipt as proof of an ongoing or pending transaction; this can be used as voucher by either the service provider or customer as evidence of transaction.

- One of the benefits of this marketplace will be helping start-ups to quickly locate and interact with industry leaders and experts while service buyers get the best professionals working for them, placing the responsibility of identity verification on the Cryptocurrency Market platform and a smooth contract settlement on our smart contract.

Cryptocurrency Asset Listing Platform.

- One of the problems encountered in the cryptocurrency and blockchain space is the lack of accurate information, there seems to be a lot of manipulations going on in so many quarters. The Cryptocurrency Market platform will have features like trade history, order book, and daily and total generated volume, current trading volume, active trading platforms, and so much more for each listed token or P2P trading exchange.

- With these features available on the Cryptocurrency Market platform, there will be no need to roam around trying to search out information about any asset.

- This will be a platform where all available information about any asset or project will be made available on one platform; it will also be an avenue for projects to create trust between them and their community and also attract investors based on trust.

Cryptocurrency assets and exchange listing.

- As the name implies, the Cryptocurrency Market platform will list available, credible, and active cryptocurrency projects, exchanges, professionals, and companies on the platform for proper tracking. There will be strict criteria for listing any project, asset, exchange, professional, or company. The process will begin with an application to the appropriate channel for verifications and provision of every other requirement needed by the team.

PLATFORM & TOKEN UTILITY

- As a platform that provides a marketplace to help service providers supply services to customers on trust while also helping service buyers to get the service providers, CCM token which is the base token powering the Cryptocurrency Market platform will be used for fee payments for all transactions carried out on the platform.

- Buyers and sellers of services can decide to pay or receive payments in BTC, ETH, USDT, MOR, or CCM. Transaction fee will be paid in CCM, BTC, ETH USDT or MOR depending on what the user chooses. These fees will be used as rewards on the staking platform.

- CCM token can also be used for payment for services offered on the marketplace; for example professional adverts, project adverts, promotions and any other value added services offered on the platform.

- Other cryptocurrencies like BTC, ETH, USDT & MOR and Fiats can be swapped for CCM on the platform to be used for transactions and processing fees.

- We believe there are a lot of corporate bodies that lose funds annually to both frauds and unprofessional service providers, Cryptocurrency Market platform will drastically eliminate these loses while ensuring customers are satisfied with service provided to them. Cryptocurrency Markets presents a whole new level of blending trust and satisfaction all in on one platform, and there's no sector that is exempted.
  We know more and more institutions and sectors are embracing the blockchain and cryptocurrencies globally, but the platform will have available global payment options to enable every sector take advantage of the exceptional services provided on the Cryptocurrency Market platform.

Cryptocurrency Markets TOKENOMICS

Total Supply - 10,000,000CCM
SoftCap – 100ETH
HardCap – 2000ETH

- Team 0%
- Presale 70%
- Development 10%
- Marketing 19%
